**V120-22-R6C**  Graphic Operator Panel & Programmable Logic Controller

24VDC, 6 pnp/npn digital inputs, 6 analog inputs, 1 high-speed counter/shaft encoder input, 6 relay outputs, I/O expansion port, 2 RS232/RS485 ports, CANbus

<table>
<thead>

</tr>
</tbody>
</table>

Notes:
1. All 6 inputs can be set to pnp (source) or nnp (sink) via a single jumper and appropriate wiring.
2. Nnp (sink) inputs use voltage supplied from the controller’s power supply.
3. Input #0 can function as either high-speed counter or as part of a shaft encoder. In either case, high-speed input specifications apply. When used as a normal digital input, normal input specifications apply.
4. Input #1 can function as either counter reset, or as a normal digital input; in either case, specifications are those of a normal digital input. This input may also be used as part of a shaft encoder, in this case, high-speed input specifications apply.

**Warnnings:**
- Unused pns should not be connected. Ignoring this directive may damage the controller.
- Improper use of this product may severely damage the controller.
- Refer to the controller's User Guide regarding wiring considerations.
- Before using this product, it is the responsibility of the user to read the product's User Guide and all accompanying documentation.
Analog Inputs

Type of Input

- **AN0 - AN1**: Two 10-bit, multi-range inputs: 0-10V, 0-20mA, 4-20mA
- **AN2 - AN5**: Four 10-bit, current inputs: 0-20mA, 4-20mA. See Note 5

Conversion method: Successive approximation

- **AN0 - AN1**: >100KΩ for voltage, 500Ω for current, 243Ω for current
- **AN2 - AN5**: Resolution: 4-bit (4-20mA)

Galvanic isolation: None

- Resolution (except 4-20mA): 10-bit (1024 units)
- Resolution at 4-20mA: 204 to 1023 (820 units)

Conversion time: According to filter

Absolute max. rating: ±15V

Full scale error: ±2 LSB

Linearity error: ±2 LSB

Status indication: Yes, See Note 6.

Notes:

5. Analog inputs AN2 - AN5 can function only as current inputs.
6. The analog value can also indicate when the input is functioning out of range. If an analog input deviates above the permissible range, its value will be 1024.

Voltage / Current connection

Digital outputs

- 5 relay outputs, 230VAC / 24VDC

Type of relay: SPST-NO relay

Isolation: by relay

Output current: 5A max. (resistive load), 1A max. (inductive load)

Max. frequency: 0.5Hz (at maximum rated load)

Contact protection: External precautions required

Relay Outputs

Graphic Display

- STN, LCD display
- Illumination backlight: LED, yellow-green, software-controlled
- Display resolution: 128x64 pixels

Keypad

- Sealed membrane
- Number of keys: 16

Program

- Application Memory: 448K
- Memory Bits ( coils): 2048
- Memory Integers (registers): 1600
- Long Integers (32 bit): 256
- Double Word (32 bit unsigned): 64
- Floats: 24
- Timers: 192
- Counters: 24
- Data Tables: 120K (RAM) / 64K (FLASH)
- HMI displays: Up to 255
- Execution time: 0.8μs for bit operations

RS232/RS485 serial ports

- Used for:
  - Application Download/Upload
  - Application Testing (Debug)
  - Connect to GSM or standard telephone modem:
    - Send/receive SMS messages
    - Remote access programming
  - RS485 Networking

- RS232 (See Note 8): 2 ports
  - Galvanic isolation: None
  - Voltage limits: ±20V

- RS485 (See Note 8): 2 ports
  - Input voltage: -7 to +12V differential max.
  - Cable type: Shielded twisted pair, in compliance with EIA RS485
  - Galvanic isolation: None
  - Baud rate: 110 – 57600 bps
  - Nodes: Up to 32

Note:

8. RS232/RS485 is determined by jumper settings and wiring. Refer to the controller’s User Guide regarding communications.

I/O expansion port

- Up to 128 additional I/Os, including digital & analog I/Os, RTD and more.

CANbus port

- Up to 63 nodes
- Baud rate range: 20kbaud - 1Mbps
- Cable length: Up to 1000m for 24VDC network

CANbus connection

Miscellaneous

- Clock (RTC): Real-time clock functions (Date and Time)
- Battery back-up: 7 years typical battery back-up for RTC and system data.
- Battery: Coin type, 3V lithium battery, CR2450
- Weight: 320g (11.3 oz)
- Operational temperature: 0 to 50°C (32 to 122°F)
- Storage temperature: -20 to 60°C (-4 to 140°F)
- Relative Humidity (RH): 5% to 95% (non-condensing)
- Mounting method: DIN-rail mounted (IP20/NEPA1)
  - Panel mounted (IP65/NEPA4X)

V120-22-R6C 02/04
**V120-22-R6C**  
**I/O Jumper Settings**

The tables below show how to set a specific jumper to change the functionality of the controller. To open the controller and access the jumpers, refer to the directions at the end of these specifications.

**Important:**
Incompatible jumper settings and wiring connections may severely damage the controller.

### Digital Inputs type

<table>
<thead>
<tr>
<th></th>
<th>npn (sink)</th>
<th>pnp (source)*</th>
</tr>
</thead>
<tbody>
<tr>
<td>JP1</td>
<td>A</td>
<td>B</td>
</tr>
</tbody>
</table>

**Note:**  
Jumper #2 is not used.

### Analog Inputs type

<table>
<thead>
<tr>
<th></th>
<th>Voltage</th>
<th>Current*</th>
</tr>
</thead>
<tbody>
<tr>
<td>JP3</td>
<td>A</td>
<td>B</td>
</tr>
<tr>
<td>JP4</td>
<td>A</td>
<td>B</td>
</tr>
</tbody>
</table>

*Default factory settings.

In this figure, the jumper settings will cause the controller to function as follows:
- Digital inputs: npn
- Analog input #0: Voltage input
- Analog input #1: Current input

---

**Opening the controller’s enclosure**

1. Turn power off before opening the controller.
2. Locate the 4 slots on the sides of the enclosure.
3. Using the blade of a flat-bladed screwdriver, gently pry off the back of the controller as shown in the figure below, exposing the controller’s board.
